

Advanced Manual Smart Contract Audit

Project: Bitzen

Website: https://bitzen.space/

2 low-risk code issues found

0 medium-risk code issues found

0 high-risk code issues found

Contract Address

0xdacc0417add48b63cbefb77efbe4a3801aad51ba

Disclaimer: Coinsult is not responsible for any financial losses. Nothing in this contract audit is financial advice, please do your own research.

Disclaimer

Coinsult is not responsible if a project turns out to be a scam, rug-pull or honeypot. We only provide a detailed analysis for your own research.

Coinsult is not responsible for any financial losses. Nothing in this contract audit is financial advice, please do your own research.

The information provided in this audit is for informational purposes only and should not be considered investment advice. Coinsult does not endorse, recommend, support or suggest to invest in any project.

Coinsult can not be held responsible for when a project turns out to be a rug-pull, honeypot or scam.

Tokenomics

Rank	Address	Quantity (Token)	Percentage
1	Bitzen Space: Deployer	1,000,000,000	100.0000%

Source Code

Coinsult was comissioned by Bitzen to perform an audit based on the following smart contract:

https://bscscan.com/address/0xdacc0417add48b63cbefb77efbe4a3801aad51ba#code

Manual Code Review

In this audit report we will highlight all these issues:

2 low-risk code issues found

0 medium-risk code issues found

0 high-risk code issues found

The detailed report continues on the next page...

Low-Risk: Could be fixed, will not bring problems.

Too many digits

Literals with many digits are difficult to read and review.

```
_totalSupply = 10000000000 * 10**9 ;
```

Recommendation

Use: Ether suffix, Time suffix, or The scientific notation

Exploit scenario

```
contract MyContract{
    uint 1_ether = 100000000000000000000;
}
```

While 1_ether looks like 1 ether, it is 10 ether. As a result, it's likely to be used incorrectly.

Low-Risk: Could be fixed, will not bring problems.

Redundant Statements

Detect the usage of redundant statements that have no effect.

```
function _msgData() internal view virtual returns (bytes memory) {
   this; // silence state mutability warning without generating bytecode - see https://github.com/erreturn msg.data;
}
```

Recommendation

Remove redundant statements if they congest code but offer no value.

Exploit scenario

```
contract RedundantStatementsContract {
    constructor() public {
        uint; // Elementary Type Name
        bool; // Elementary Type Name
        RedundantStatementsContract; // Identifier
    }
    function test() public returns (uint) {
        uint; // Elementary Type Name
        assert; // Identifier
        test; // Identifier
        return 777;
    }
}
```

Each commented line references types/identifiers, but performs no action with them, so no code will be generated for such statements and they can be removed.

Owner privileges

- Owner cannot set fees higher than 25%
- Owner cannot pause trading
- Owner cannot change max transaction amount

Extra notes by the team

This smart contract does not contain a mint function and consists of zero fees.

Contract Snapshot

```
contract BITZEN is Context, IBEP20 {
  using SafeMath for uint256;

mapping (address => uint256) private _balances;

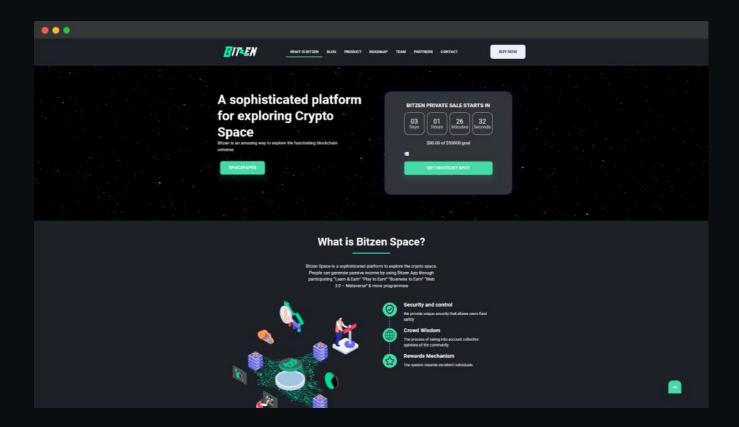

mapping (address => mapping (address => uint256)) private _allowances;

uint256 private _totalSupply;

string private _name;
string private _symbol;
uint8 private _decimals;
```

Website Review

Coinsult checks the website completely manually and looks for visual, technical and textual errors. We also look at the security, speed and accessibility of the website. In short, a complete check to see if the website meets the current standard of the web development industry.

- Mobile Friendly
- Does not contain jQuery errors
- SSL Secured
- No major spelling errors
